#### Best Practice 1

**Title of practice:** Plantation of 1000 trees and their proper care and maintenance in campus and area around the campus.

**The objective of practice:-** To sensitize students about environmental issues and make them socially responsible citizens.

**The context:-** Institute aims to provide engineers having excellent technical skills. At the same time, he should be groomed with good social values and ethics.

**The practice:-** It is known that merely planting a tree is not enough. Its proper care and maintenance is necessary for at least 4 to 5 years (depending upon the type of plant). So the institute has started the practice of planting the sapling and its proper care and maintenance by students themselves. Each student or group of students is assigned a plant for its care and maintenance. Thousand of trees have been planted in the campus and the area around the campus under the programme '*Shahashtra Vruksha Lagwad*'. These plants are cared and maintained by students. After completion of the academic program, when students leave the institute, the plant possessed by them is handed over to the fresh students for its caring.

**Evidence of success:-** Social developments and social reforms in any area of society are achieved by selfless service without wanting anything in return. This practice helps in inculcating the importance of selfless service in the students. More participation of students in various social activities was observed. Most of the students are enjoying the social service as a habit.
